Introduction

Exeed Litecrete products are a low unit weight, modern construction material with the exceptional thermal insulation. It is a versatile material which is able to provide solutions below ground in foundation walls, in suspended beam and block floors and all types of internal and external walling situations.

Exeed Litecrete products have been used for the inner leaf of cavity walls in conjunction with the various insulation materials, making a valuable contribution to the overall thermal performance of the building.

More recently the introduction of thin jointed block work has seen Exeed System providing a fast build method by adapting techniques proven to suit UAE construction methods.

Authority
Exeed Litecrete products are marked to BS EN 771-4, and are manufactured under a Quality System complying with Dubai Municipality.

Appearance
Exeed blocks have a white medium textured surface. Each product type is supplied in wooden pallet.

Working with Exeed Litecrete
Exeed products have excellent working characteristics. They are light and easy to handle and quick to install. They can be easily cut, chased and fixed into. Exeed AAC is suitable for finishing with render, cladding, plaster or dry lining.
COMPANY PROFILE

Overview:
Exeed Litecrete Company was established with the main objective of providing the highest quality building material. The company is a manufacturer of AAC Blocks with the specifications to match the most demanding of building requirements. It is able to offer a product for every application from an extensive network of production facilities.

Corporate History:
Exeed Litecrete Company is a group of companies owned by Exeed industries. Exeed Litecrete is a part of one of the biggest group in UAE and started its commercial production in 2009.
